

To Do

Doing

Done

Have a user table created in the DB. Client and Administrator should be two distinct types of user (as an extra column). User table should reference the Client table (by id)

ZK

Created a basic login interface with salts and hashed passwords

Update the login interface to the new one and make sure to remove the "Create Account" functionality from the public

TR

Have an interface for the admin to edit the client

Have a booking table in the DB that the calendar can access.

Have the calendar display the current events each listed day

Allow an administrator to add/modify/delete a client through a interface on the main dashboard.

TRZK

Setup email system that sends to all clients username/password

H

Add a list
